

django

Work on URL

open `urls.py` of main project(mainpro)
paste the following Code:

```
from django.conf.urls import include, url  
from django.contrib import admin
```

```
urlpatterns = [  
    url(r'^admin/', admin.site.urls),  
    url(r'^demo/', include('subpro.urls')),  
]
```

make a new file with name **urls.py** in sub
project(subpro)

paste the following Code:

```
from django.conf.urls import url  
from . import views
```

```
urlpatterns = [  
    url(r'^$', views.index),
```

Open views.py of sub project(subpro)

paste the following Code:

```
from django.http import HttpResponse  
def index(request):  
    return HttpResponse("<h1>HELLOOO FRDS</h1>")
```
