open urls.py of main project(mainpro)

paste the following Code:

```python
from django.conf.urls import include, url
from django.contrib import admin

urlpatterns = [
    url(r'^admin/', admin.site.urls),
    url(r'^demo/', include('subpro.urls')),
]
```

make a new file with name urls.py in sub project(subpro)

paste the following Code:

```python
from django.conf.urls import url
from . import views

urlpatterns = [
    url(r'^(?P<idd>[0-9]+)/$', views.index1,
    name='index1'),
```

Open views.py of sub project(subpro).paste the following Code:

```python
from django.shortcuts import render
from django.http import HttpResponse
from .models import table1
def index(request):
    #return HttpResponse("</h1>HEEELLLOO<h1>")
    all_data=table1.objects.all()
    context={
        'all_data':all_data,
        }
```

First make a folder with name templates in sub project. then again

make another folder named with subpro inside templates folder.

<html>

<body>

<h1>hhhhhh</h1>

{{m1.id}}

**
**

{{m1.username}}
