open urls.py of main project(mainpro)

paste the following Code:

```
from django.conf.urls import include, url
from django.contrib import admin

urlpatterns = [
    url(r'^admin/', admin.site.urls),
    url(r'^demo/', include('subpro.urls')),
]
```

make a new file with name urls.py in sub project(subpro)

paste the following Code:

```
from django.conf.urls import url
from . import views

urlpatterns = [
    url(r'^$', views.index),
    url(r'^(?P<idd>[0-9]+)/$', views.index1),
]
```

Open views.py of sub project(subpro)

paste the following Code:

```python
from django.http import HttpResponse
def index1(request,idd):
    return HttpResponse("WELVCOME"+ str(idd))
```
